Submission Summary

Conference Name

4th International Conference on Artificial Intelligence: Theory and Applications

Paper ID

998

Paper Title

Evaluating the Robustness of Lightweight Machine Learning Models to Label Noise

Abstract

Label noise is a common problem in real-world datasets and can compromise the reliability of machine learning models. In this work, we study the robustness of six widely used models - Logistic Regression, Decision Tree, Random Forest, Support Vector Machine (SVM), K-Nearest Neighbours (KNN), and LightGBM, with respect to two types of label noise: symmetric and asymmetric. We conducted experiments on two benchmark datasets: Breast Cancer Wisconsin and Adult Income, to explore whether robustness patterns are consistent under different data settings.

The training data are corrupted at varying levels(0%, 10%, 20% and 30%) and the evaluation is performed on clean test data using Accuracy and F1-score. Results show that performance degrades more due to symmetric noise than asymmetric noise across all models. The decision Tree model is the most sensitive to label corruption whereas, SVM consistently shows stable robustness. F1 score proves to be more sensitive to noise than accuracy, especially for data with class imbalance.

These results highlight the need for robust models to noisy labels and the need for evaluation metrics that capture the true effect of noise in real-world applications where the quality of data is unknown.

Submission Questions Response

1. Conflict of interest

The authors declare no conflict of interest and all authors are aware of this submission. In case of any conflict submitting author will be responsible.

Agreement accepted

2. Status of using third-party material in your article.

Third party content is defined as any material within the manuscript which is not your original work. Third party content may consist of text passages, figures, photos, screenshots, etc. and be found in many places such as but not limited to - the Internet, print and online books and articles, theses, annual reports, conference material, photocopies, course packages, translations, visually impaired readers. In particular, pay close attention to sensitive images such as identifiable persons or human research participants, recognisable architecture, logos, brands/trademarks, and images from online photo libraries. Please refer to Springer Nature Guide to Copyright and Permissions for further guidance. You are responsible for clearing the rights for third party content under your publishing agreement. Please confirm if your manuscript contains any third-party content?

I am not using third-party material for which formal permission is required.

3. Certificate of originality

This is to certify that my submitted research paper is an outcome of my research work. I have duly acknowledged all the sources from which the ideas and extracts have been taken. The submitted paper is free from plagiarism and has not been submitted elsewhere for publication. I am aware that the publisher/conference organizer can reject it at any publication stage if it is found to be plagiarized or machine-generated (AI-Generated).

Agreement accepted

4. Corresponding Author's Contact number

Please provide the Contact number of the Corresponding Author, including the Country code.

+91 99153 69888

5. Country Name

Please provide the Name of the country where most authors belong.

India

6. Authors Contributions

Please specify individual authors' contributions in the research as recommended by the Committee on Publication Ethics (COPE).

(e.g. , study conception and design: Author_1, Author_2; data collection: Author_2; analysis and interpretation of results: Author_1, Author_2, Author_3; draft manuscript preparation: Author_2. Author_3. All authors reviewed the results and approved the final version of the manuscript.)

An author name can appear multiple times, and each author name must appear at least once. For single authors, use the following wording:

The author confirms sole responsibility for the following: study conception and design, data collection, analysis and interpretation of results, and manuscript preparation.

Study conception and design: Garima
Methodology design and experimental direction: Garima
Data collection and preprocessing: Garima, Gurnoor Dhaliwal
Implementation and experiments: Garima
Analysis and interpretation of results: Garima, Gurnoor Dhaliwal
Visualization and documentation: Gurnoor Dhaliwal

Supporting contributions (code assistance, validation, and minor inputs): Gagan Deep, Divesh Gupta

Supervision and guidance: Dr. Shikha Tuteja

Manuscript drafting: Gurnoor Dhaliwal
Manuscript review and final approval: All authors

7. Conference Rules and Guidelines

I am agree with Conference Rules and Guidelines given at https://theioes.org/aita2026/conference-rules.html

Agreement accepted
